Subject: Viewer Tool

Good Afternoon,

I was talking with Jamie today and while she was at the Red River Supply Fire ER. She was in need of a viewer tool that would select all of the scribe sample locations using a selection and have those locations returned in a CSV. This would allow her and other START members to identify samples for an area and then just look to scribe if additional info was needed. This would be a rather easy tool to build (4 Hours max). Would this work for you?
Thanks

John
